

QuotaHire Mobile App — PRD v1.2

Master Product Requirement Document (Sales, HR Ops, & Sales Record Ledger)

Project Name: QuotaHire Mobile	Platform: React Native (Expo)	Backend: Django Framework	Database: PostgreSQL
Document Version: 1.2.0 (Complete)	Target Release: Q3 2026	Admin Interface: Django Admin	Primary Currency: NGN (₦)

1. Executive Summary & Core Objective

QuotaHire is an enterprise mobile platform that unifies sales lead capture, client onboarding, outsourced staff management, automated payroll generation, and financial accounting into a single React Native application.

This document details the complete requirements across all 4 system modules:

- **Module 1: Authentication & Role Router:** Multi-role JWT login dispatching to specific views.
- **Module 2: Sales View (Screens 2.1 – 2.8):** Lead tracking, package selection, deposit/full payment entry, and handover to Ops.
- **Module 3: HR / Operations View (Screens 3.1 – 3.4):** Company records, managed staff roster, offer letter document uploads, and automated payroll engine.
- **Module 4: Sales Record & Financial Ledger (Screens 4.1 – 4.2):** Dedicated login interface auditing auto-synced revenue (credits), logging operational expenses (debits), and computing net profit.

2. Technical Architecture Stack

Layer	Technology	Architectural Role
Mobile Frontend	React Native (Expo SDK)	Cross-platform app, React Navigation, Axios, Expo SecureStore token persistence.
Backend Framework	Django + DRF	RESTful API endpoints for auth, lead management, requests, payroll, and financial ledger.
Database Layer	PostgreSQL	ACID-compliant database storing users, leads, requests, staff, payroll, and expenses.
Back-Office Admin	Django Admin Console	Superadmin interface for raw data audits, status overrides, and system configuration.
Document Engine	WeasyPrint / OpenPyXL	Backend generation of downloadable PDF offer letters, payroll sheets, and profit statements.

3. Database Schema & Django Models Architecture

```
1. CustomUser (AbstractUser):
  - role: Enum ('SALES_CAM', 'HR_OPS', 'FINANCE_ADMIN', 'SUPERADMIN')

2. CompanyLead:
  - company_name, nature_of_business, contact_person_name, phone, email, created_by (FK -> CustomUser)

3. CompanyRequest:
  - company (FK -> CompanyLead), staff_needed_count, role_title, salary_budget, commission_structure,
  resumption_date, job_description
  - package_type: Enum ('RECRUITMENT_ONLY', 'RECRUITMENT_PLUS_MANAGED')
  - payment_status: Enum ('DEPOSIT_PAID', 'FULL_PAYMENT', 'PENDING')
  - amount_paid (DecimalField) -> Synchronizes directly as Credit in Sales Record Ledger
  - operational_status: Enum ('NEW_REQUEST', 'IN_SOURCING', 'DEPLOYED')

4. ManagedStaff:
  - assigned_company (FK -> CompanyLead), request (FK -> CompanyRequest), full_name, phone, email, gross_salary,
  net_salary (auto-computed), bank_name, account_number, offer_letter_pdf

5. PayrollRecord:
  - month_year, company (FK -> CompanyLead), total_gross, total_deductions, total_net

6. ExpenseRecord:
  - expense_title, category: Enum ('OPERATIONAL', 'MARKETING', 'COMMISSION', 'SALARY_PAYROLL', 'INFRASTRUCTURE',
  'OTHER')
  - amount (DecimalField), date_incurred, notes, receipt_proof, logged_by (FK -> CustomUser)
```

4. Screen-by-Screen Functional Specifications

Module 1: Authentication & Navigation Dispatcher

Screen 1.0: Role-Based Login & Router

Inputs: Email, Password, Remember Me.

Logic: Decodes JWT user role upon login:

- SALES_CAM → Auto-routes to **Screen 2.1 (Sales Dashboard)**
- HR_OPS → Auto-routes to **Screen 3.1 (HR Dashboard)**
- FINANCE_ADMIN → Auto-routes to **Screen 4.1 (Sales Record Dashboard)**

Module 2: Sales View — Lead Capture to Handover Pipeline

Screen 2.1: Sales Dashboard

Metrics: Leads This Month | Revenue Closed (₦)

Actions: [+ New Lead] button | Active Leads list | My Companies tab

Screen 2.2: Add/Edit Lead

Fields: Company Name, Nature of Business, Contact Person, Phone, Email

Actions: [Save Draft] | [Save & Continue]

Screen 2.3: Company Profile Hub

Header: Company Details & Contact Info

Tabs: Overview | Requests | Payments

Primary Action: [+ New Company Request]

Screen 2.4: Company Request Form

Fields: Staff Needed Count, Role, Salary, Commission, Resumption Date, Job Description

Actions: [Save & Continue Later] | [Proceed]

Screen 2.5: Select Package

Options: 1. Recruitment Only | 2. Recruitment + Managed Staffing

Actions: [Save & Continue Later] | [Proceed]

Screen 2.6: Payment Entry

Structure: Radio Choice (Deposit vs Full Payment) + Amount Paid Input (₹)

Actions: [Save & Continue Later] | [Proceed]

Screen 2.7 & 2.8: Confirm, Transfer to Operations & Profile History

Summary View: Specs + Package + Amount Paid breakdown.

Action: [Save and Transfer to Operations] updates DB status to `NEW_REQUEST`, triggers Expo Push Notification to Ops, auto-syncs credit amount to Sales Record Interface, and returns to Screen 2.8 showing request history log (e.g., Request #001: 10 Sales Agents - Sent to Ops).

Module 3: HR / Operations View — Deployment & Payroll

Screen 3.1: HR Dashboard

Metrics: New Requests Queue | Staff to Deploy

Tabs: Company Records | Managed Staffing | Payroll

Screen 3.2: Company Records

List of clients. Tapping company opens staff roster.

Action: [+ Add Staff to This Company]

Screen 3.3: Managed Staff Profile

Directory of ALL staff across companies.

Detail View: Bank Details, Gross Salary, Auto Net Salary, [Signed Offer Letter] PDF picker/viewer.

Screen 3.4: Automated Payroll Engine

Filters: Month/Year + Company Selector

Calculated Grid: Gross | Deductions | Net Salary

Action: [Generate Payroll] → PDF/Excel download & Net sync.

Module 4: Sales Record & Financial Ledger Interface

Screen 4.1: Sales Record Dashboard (Ledger)

Requires **Separate** **Login** **Credentials**
(`FINANCE_ADMIN`)

Financial Summary Cards:

- **TOTAL REVENUE (CREDIT)** Live auto-sum of closed deals from Screen 2.6.
- **TOTAL EXPENSES (DEBIT)** Sum of manually logged expenses.
- **NET PROFIT** Revenue minus Expenses computation.

Actions: [+ Log Expense] | [Export Financial Statement PDF/Excel]

Screen 4.2: Add Expense Form

Input Fields:

- Expense Title / Description (Text)
- Category Dropdown (Ops, Marketing, Payroll, etc.)
- Amount Incurred (Currency ₹)
- Date Incurred (DatePicker)
- Notes & Remarks (Multi-line Text)
- Receipt Attachment (File/Image Upload)

Action: [Save Expense Record] updates total debits & net profit.

5. Core REST API Endpoint Specifications

HTTP Method	Endpoint URI	Payload / Description	Role Required
POST	/api/v1/auth/login/	Email + Password → JWT Token & Role Dispatch	Public
GET/POST	/api/v1/leads/	Create/Fetch active lead records	Sales / HR
PUT	/api/v1/requests/{id}/transfer/	Transfer request to Ops & Sync Credit to Sales Record	Sales CAM
POST	/api/v1/payroll/generate/	Execute auto-calc & output payroll sheet	HR Ops
GET	/api/v1/finance/ledger/	Fetch auto-synced credits, debits, and net profit	Finance Admin
POST	/api/v1/finance/expenses/	Log new business expense record	Finance Admin
